BLEAKER ISLAND

Wonderful wildlife on a Falkland farm

www.falklandsconservation.com

BLEAKER ISLAND

Bleaker Island lies close to the south-east coast of East Falkland, at the entrance to Adventure Sound.

Cassard Point (named after a French sailing vessel wrecked here in 1906) is only half a mile (800 m) away from Driftwood Point on the mainland.

Bleaker Island is reached by a 30-minute flight from Stanley, or Mount Pleasant Complex, with the Falkland Islands Government Air Service (FIGAS). Passengers from cruise ships arrive by Zodiac on the 1.6 km (1 mile) long beach at Sandy Bay.

Together with its outlying islands, the Bleaker Island Group is internationally recognised as an Important Bird Area (FKO4). The northern part of the Island is a National Nature Reserve.

The Falkland Islands archipelago lies 350km (280miles) to the east of the South American continent. It consists of two large islands, East and West Falkland, and more than 750 small islands and islets.

Visitor Accommodation

Constructed in 2011, **Cassard House** provides high quality accommodation for eight people in four ensuite bedrooms. The house has solar-powered underfloor heating and hot water, triple glazing, high insulation levels, a large conservatory and a heat recovery unit.

The nearby **Cobb's Cottage** (named after Arthur Cobb, farm manager and naturalist, who lived on the Island from 1906 to the 1920s) has two twin ensuite bedrooms, a sun lounge, full central heating, TV/radio and WiFi.

Both units have fully equipped kitchens, provided bed linen and 24-hour power, and are available on a self-catering or full board basis. They are located within easy walking distance to penguins, cormorants, seals and wildfowl.

About Bleaker Island

Bleaker Island was first known as Long Island (and referred to as such on the chart compiled by the Beagle survey of which Charles Darwin was a part in 1834). It subsequently became Breaker Island, after the large waves that crash against it, but since at least 1857 it has been called Bleaker Island – although it is far from bleak.

The island covers 2,070 ha (5,155 acres) with a varied coastline of low cliffs, sloping bedrock beaches, wide sandy bays and sheltered coves. It is $20 \, \text{km}$ ($12 \, \frac{1}{2} \, \text{miles}$) long and never more than $3 \cdot 2 \, \text{km}$ (2 miles) wide, with gentle hills, the highest point being Semaphore Point 27 m (89 ft), north-east of the settlement.

For many years the Island was owned by the Falkland Islands Company and it has been a sheep farm for over 100 years. Now privately owned, and under organic sustainable management, it has 1,000 sheep and a nucleus of 55 Hereford breeding cows (imported from Chile in 2004). Here wildlife and domestic animals happily co-exist.

Extensive greens around the Island provide excellent pasture – naturally fertilised by geese

and seabirds. An extensive tussac grass fringe of $4 \, \text{km} \, (2 \, \frac{1}{2} \, \text{miles})$ is found on the eastern coast of the island near the settlement and is a haven for songbirds and sea lions. Other bare and eroded areas have been fenced and are being replanted with tussac. Established tussac areas are managed sustainably to provide winter fodder for cattle. The farm is organic, using no fertilisers or drugs.

Flowers on Bleaker include the yellow and dog orchids, lady's slipper, common violet and vanilla daisy. Queen of the Falklands fritillary butterflies breed in the Pebbly Bay area, feeding on native violet flowers. Forty different breeding birds have been recorded, including Magellanic, southern rockhopper, macaroni and gentoo penguins and a very large colony of imperial cormorants.

Peale's dolphins reside in the bays south of the settlement year round. Sea lions are found on Bleaker in the summer months. Sei whales can be seen frequently off the island in late summer and autumn.

BLEAKER ISLAND

Please follow the guidelines

MAINTAIN A DISTANCE of 6m (20ft) between you and any wildlife at all times.

WILDLIFE HAVE RIGHT OF WAY AT ALL TIMES. Do not block wildlife from returning or entering the sea.

TAKE CARE on steep slopes and slippery rocks.

LEAVE GATES as you find them.

BE AWARE of biosecurity. Do not introduce invasive species to the area.

BE CAREFUL not to trample the burrows of nesting seabirds, particularly those of Magellanic penguins. Avoid walking across areas of high burrow density.

(A)

no fires

do not litter

no flash

LAMBING SEASON

The lambing season is from

October to December.

During this time visitors are

asked to take extra care not

to disturb ewes as they may

abandon lambs if startled.

Kelp Beds

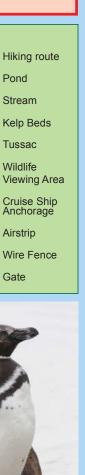

Airstrip

Gate

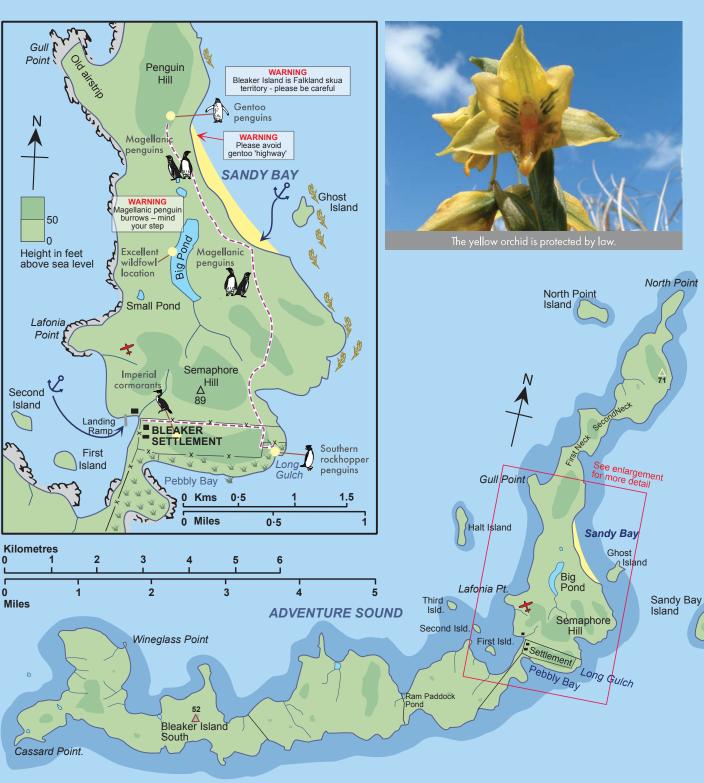

The lady's slipper is endemic to the Falkland Islands

Avoid areas where Magellanic

Exploring Bleaker Island

The northern end of Sandy Bay (cruise ship landing beach) teems with **gentoo penguins**. There are 2,000 breeding pairs on Penguin Hill. An easy short walk south from Sandy Bay to Long Gulch will reward the visitor with good views of many Falkland breeding birds. Watch out in particular for **Magellanic penguins**, southern and striated caracaras, brown skuas, ruddy-headed geese and two-banded plovers.

Snowy sheathbills, a non-breeding visitor, can be seen particularly around the colonies of penguins and imperial cormorants.

Between Sandy Bay and the Settlement lies Big Pond. This and the two smaller ponds to the north are popular with Chiloë wigeon, southern silvery and white-tufted grebes, speckled and silver teal and Falkland steamer duck. Black-necked swans also breed here occasionally.

On the south-east facing coast, among the tussac plantations (watch out for **Sedge wrens**), is a deep fissure in the cliffs known as the Long Gulch. It is a favourite spot for an impressive number of seabirds which breed on the rocky ledges. Because it is an area inaccessible to rats, **tussacbirds** can also be found here.

Bird checklist	☐ Falkland steamer duck	☐ Snowy sheathbill
☐ King penguin	☐ Chiloë wigeon	☐ Brown skua
☐ Gentoo penguin	☐ Speckled teal	☐ Kelp gull
☐ Macaroni penguin	☐ Crested duck	☐ Dolphin gull

☐ Kelp goose	☐ Rufous-chested dotterel	☐ Black-chinned siskin
☐ Upland goose	☐ South American snipe	
☐ Ruddy-headed goose	☐ White-rumped sandpiper	

Seabirds of Bleaker Island

This Island is particularly important for its colonies of cormorants. Over 8,000 pairs of **imperial cormorants** breed in the main colony in the centre of the Island. During the breeding season these handsome birds develop a bright blue eye-ring, deep orange caruncles and a recurved crest on their forehead, which all diminish as the season progresses. The Long Gulch is favoured by the smaller **rock shags**, often seen as solitary feeders in kelp patches.

Seven sub-colonies of southern rockhopper penguins (about 720 pairs) breed along the southern side of the Long Gulch. They climb up very steep cliffs with ease bounding together with both feet and using their bill for support in difficult places. They are summer visitors and will leave their colony in April to spend the winter at sea. A single pair of macaroni penguins (with golden yellow head plumes and a larger bill) can sometimes

be seen in amongst the rockhoppers, with the king penguin also an occasional visitor. There is one large colony of gentoo penguins on Penguin Hill. They will approach sitting observers if you avoid sudden movements, but will panic and rush away if approached too closely. Magellanic penguins, which nest in 2 m (6 ft) deep underground burrows, can be found right across the island.

Southern giant petrels nest at a number of sites along the Adventure Sound coast. When breeding (from September to December with young fledging in late March), these large birds are very sensitive to disturbance and must not be startled or approached any closer than 200 m. They are scavengers which seek out carcasses of dead seals, penguins, sheep or whales - and are an excellent indication of beach strandings.

Bleaker Island qualifies as an Important Bird Area (FKO4), a global standard set by BirdLife International.

Imperial cormorant colony

Protecting wildlife from invasive species

Tussacbird (above), still occasionally found on Bleaker Island, is particularly threatened by rats accidentally introduced in the 1980s whose presence has led to a reduction in the number of Falkland songbirds. However, the offshore islands of North Point, Halt and Sandy Bay remain rat-free and support populations of the endemic Cobb's wren. It is hoped that rats can be eradicated from the main island and wildlife diversity restored to its former level. It is vitally important that invasive species are prevented from spreading to new islands in the Falklands archipelago. In the absence of trees, native ground-nesting bird populations can be devastated by rodent predation.

To prevent the spread of invasive species and diseases, you are asked to comply with a few simple measures when travelling around the islands: make sure all of your clothing, equipment and luggage is free from soil, animal faeces, seeds, insects and rodents, and scrub your footwear before each visit to a new wildlife site or seabird colony. If you have any questions about biosecurity, or wish to report diseased wildlife, please speak to the landowners or call the Department of Agriculture 27355 / Falklands Conservation 22247 for advice.

Information about other areas of outstanding wildlife and scenery, can be found in A Visitor's Guide to the Falkland Islands.

PENGUIN ADOPTION FORM

- Adopt a king penguin at the remote colony of Volunteer Point in the Falkland Islands for £25/US\$40 for 12 months.
- Help conservation efforts to protect the penguins of the Falklands.
- Receive an adoption pack by post comprising a personalised adoption certificate, king penguin photo, king penguin pin badge, postcard, Volunteer Point leaflet and FC magazine.
- Receive your adopter's newsletter by post with your renewal request.
- Receive an invitation to renew by post or by email if provided to the person named below.

Yes, I would like	e to Adopt a Penguin! (payment form overleaf)
You may wish to Add if so just let us know t	opt a Penguin as a gift or on behalf of someone else, the details.
